

QUALITY AND ENVIRONMENT POLICY

VISION

*Build Beyond Possible with
Advanced Robotic Manufacturing*

We want to lead the future of manufacturing toward a new paradigm of flexibility, efficiency, and sustainability.

MISSION

We develop and provide technological solutions to enable manufacturing companies' ability to produce advanced large scale industrial applications more efficiently and sustainably

VALUES

Openness
Courage
Responsiveness
Customer Centricity
Progressiveness

GOALS

- Empower customer centricity by identifying customers' and investors' needs, translate them into operational requirements and be able to achieve the highest level of satisfaction.
- Maintain an EQMS that is compliant with the standards EN 9100, UNI EN ISO 9001 and UNI EN ISO 14001, and with mandatory and applicable regulatory.
- Manage and review an EQMS to pursue continuous improvement and sustainable processes and goals.
- Trigger a People management aimed at a high competence level, role awareness, and involvement in the mission through personal and professional goals.
- Alignment of EQMS to strategic goals to sustain high performance of processes and the best level of conformity, by guaranteeing environmental and pollution protection, in order to pursue environmental impact reduction.
- Ensure that the integrity of the EQMS is maintained whenever changes to the system are planned and implemented, managing organizational and environmental risks in a controlled manner.
- Ensure that appropriate communication processes are carried out within the Organization and that information on the effectiveness of the EQMS is provided.
- Communicate the "Quality and Environment Policy" and make this document available to stakeholders
